## 1-2: Points, Lines and Planes

Take note

### Postulates 1-1, 1-2, 1-3, and 1-4

Complete each postulate with *line*, *plane*, or *point*.

Postulate 1-1 Through any two points there is exactly one ?.

\_\_\_\_\_

Postulate 1-2 If two distinct lines intersect, then they intersect in exactly one ?.

\_\_\_\_\_

Postulate 1-3 If two distinct planes intersect, then they intersect in exactly one ?.

\_\_\_\_\_

Postulate 1-4 Through any three noncollinear points there is exactly one ?.

\_\_\_\_\_

### EXAMPLE: 1

1. Name the points in the figure.
2. Name the plane.
3. Name a line.
4. Name 3 collinear points.
5. Name 2 coplanar points.
6. Name a ray.
7. Name a pair of opposite rays.
8. Name a line segment.

Date: \_\_\_\_\_

The 3-D cube is composed of 6 planes.

Front:

Left:

Top:

Back:

Right:

Bottom:

Example 2: Use the figure to the right to answer the following questions.

1. Name the intersection of  $\overleftrightarrow{AL}$  and  $\overleftrightarrow{LO}$
2. Name the intersection of plane ABC and plane LOD
3. Name three planes that intersect at point O
4. Name three lines that intersect at point N

Example 3: Use the figure below to answer the following questions.

5. How many planes are shown in the figure?
6. Name the planes shown in the figure:
7. Name three collinear points
8. Name a point that is NOT coplanar with points A, B, and C
9. Name four points that are coplanar
10. Name the intersection of plane N and the plane that contains points A, E, and D

Use the figure below for Exercises 1-8. Note that  $\overleftrightarrow{RN}$  pierces the plane at  $N$ . It is not coplanar with  $V$ .

1. Name two segments shown in the figure.
2. What is the intersection of  $\overleftrightarrow{CM}$  and  $\overleftrightarrow{RN}$ ?
3. Name three collinear points.
4. What are two other ways to name plane  $V$ ?
5. Are points  $R$ ,  $N$ ,  $M$ , and  $X$  coplanar?
6. Name two rays shown in the figure.
7. Name the pair of opposite rays with endpoint  $N$ .
8. How many lines are shown in the drawing?

For Exercises 9-14, determine whether each statement is *always*, *sometimes*, or *never* true.

9.  $\overrightarrow{GH}$  and  $\overrightarrow{HG}$  are the same ray.
10.  $\overrightarrow{JI}$  and  $\overrightarrow{JL}$  are opposite rays.
11. A plane contains only three points.
12. Three noncollinear points are contained in only one plane.
13. If  $\overleftrightarrow{EG}$  lies in plane  $X$ , point  $G$  lies in plane  $X$ .
14. If three points are coplanar, they are collinear.
15. **Reasoning** Is it possible for one ray to be shorter in length than another? Explain.

Use the figure at the right for Exercises 21-29. Name the intersection of each pair of planes or lines.

21. planes  $ABP$  and  $BCD$
22.  $\overleftrightarrow{RQ}$  and  $\overleftrightarrow{RO}$
23. planes  $ADR$  and  $DCQ$
24. planes  $BCD$  and  $BCQ$
25.  $\overleftrightarrow{OP}$  and  $\overleftrightarrow{QP}$

Name two planes that intersect in the given line.

26.  $\overleftrightarrow{RO}$

27.  $\overleftrightarrow{CQ}$

28.  $\overleftrightarrow{DA}$

29.  $\overleftrightarrow{BP}$
